## Fidelity Asset Allocation Private Pool Trust

- The Pool will generally have an asset mix with the following ranges: 25–65% equity securities, 25–65% fixed-income securities and 0–40% money market securities.
- Within these ranges the portfolio manager uses tactical allocations focused on downside risk mitigation with asymmetric bands. This means that based on the neutral equity mix of 50%, the portfolio manager may overweight equities by up to 15% and underweight by up to 25%, and based on the neutral fixed income mix of 40%, the portfolio manager may overweight fixed income by up to 25% and underweight up to 15%.
- The portfolio manager may change, or re-allocate the Pool's investments at any time.

## Pool management

- Portfolio managers are David Wolf and David Tulk.
- In making tactical asset allocation decisions, the portfolio manager uses extensive economic and bottom-up fundamental market inputs and extensive global macro research.

- 1 Management fees do not include administration and other operating expenses and applicable sales tax. Fees are shown in basis points. Note that fee reductions are applicable only on that portion of assets that fall within the specified tier.
- 2 The blended index is 29.5% S&P/TSX Capped Composite Index, 16.0% Bloomberg Global Aggregate Bond Index, 20.0% MSCI ACWI (All Country World Index) ex Canada Index, 23.5% FTSE Canada Universe Bond Index, 10.0% FTSE Canada 91 Day T-Bill Index, and 1.0% MSCI/REALPAC Canada Quarterly Property Index. Prior to July 1, 2024, the blended index was 30.0% S&P/TSX Capped Composite Index, 16.0% Bloomberg Global Aggregate Bond Index, 20.0% MSCI ACWI (All Country World Index) ex Canada Index, 24.0% FTSE Canada Universe Bond Index and, 10.0% FTSE Canada 91 Day T-Bill Index.
- 3 A fund's volatility is determined using a statistical measure called "standard deviation. Standard deviation is a statistical measure of how much a return varies over an extended period of time. The more variable the returns, the larger the standard deviation. Investors may examine historical standard deviation in conjunction with historical returns to decide whether an investment's volatility would have been acceptable given the returns it would have produced. A higher standard deviation indicates a wider dispersion of past returns and thus greater historical volatility. Standard deviation does not indicate how an investment actually performed, but it does indicate the volatility of its returns over time. Standard deviation is annualized. The returns used for this calculation are not load-adjusted. Standard deviation does not predict the future volatility of a fund. The investment risk level indicated is required to be determined in accordance with the Canadian Securities Administrators standardized risk classification methodology, which is based on the historical volatility of a fund, as measured by the ten-year annualized standard deviation of the returns of the fund. Standard deviation is used to quantify the historical dispersion of returns around the average returns over a recent ten-year period.

Commissions, trailing commissions, management fees and expenses all may be associated with mutual fund investments. Please read the prospectus, which contains detailed investment information, before investing. The indicated rates of return are historical annual compounded total returns for the period indicated including changes in unit value and reinvestment of distributions. The indicated rates of return do not take into account sales, redemption, distribution or option charges or income taxes payable by any unitholder that would have reduced returns. Mutual funds are not guaranteed. Their values change frequently. Past performance may not be repeated. © 2024 Fidelity Investments Canada ULC. All rights reserved.
